

# Roll Up Door Man Door

Wicket Doors for Rolling Steel Doors

## Pass Through Doors Add Functionality

If you don't need to open your rolling door every time you use the passage, adding a man door or wicket door may be the answer. They are convenient to use, and can be added to most rolling steel doors when ordering.

The wicket door frame is constructed of sturdy steel, and can be hinged to swing free of the opening, allowing maximum use of the bay passage when needed. They work well with motorized doors too, as they allow the rolling curtain to move freely during operation.

>> Adds Functionality

>> Optional Hinge for Maximum Access

>> Available for Most Rolling Doors

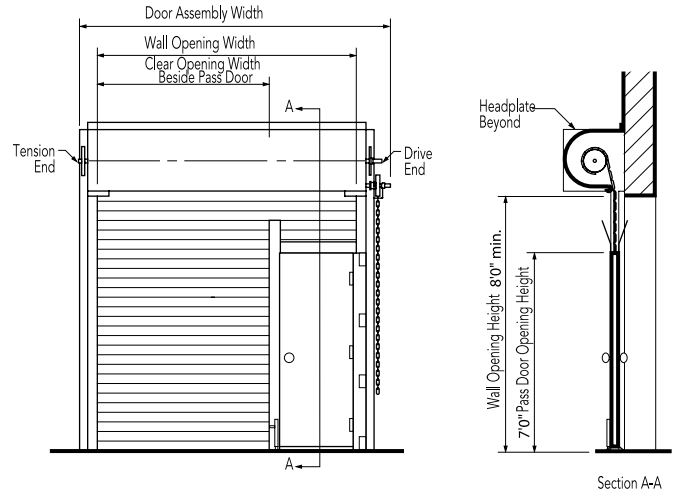

>> Variety of Personnel Doors Available.

## Good for Interior and Exterior Roll-up Doors

For fast, easy access during times when opening the whole bay up would be inconvenient, the walk-through door does the trick. You can enter and leave using the man door with little interior disturbance. It's especially helpful during times when you need to maintain an interior environment, but once in a while need a wide open entrance for deliveries or high-volume foot-traffic.
